Mohamad Alchekh

Bydgoszcz, Poland | m.alchekh@outlook.com |+(48) 798 819 899 | LinkedIn: MohamadAlchekh | Github: Mohamad-Alchekh

PHP/Laravel developer with a fresh Management Information Systems degree, experienced building production backend systems, API design, schema architecture, and authentication. Currently in Poland and open to full-time PHP/Laravel roles.

EDUCATION

Bursa Uludağ University — **Bursa, Türkiye**
BSc in Management Information Systems — Oct 2022 - Jul 2026

- **GPA:** 3.63 / 4.00

Bydgoszcz University of Science and Technology — **Bydgoszcz, Poland**
Erasmus+ Exchange Student — Oct 2025 - Mar 2026

EXPERIENCE

Bydgoszcz University of Science and Technology — **Bydgoszcz, Poland**
Software Developer Intern — Oct 2026 - Feb 2027

Özbağ Kuyumculuk — **Bursa, Türkiye**
Backend Developer Intern — Mar 2026 - Jul 2026

- Built a RESTful **Laravel/MSSQL** API for a production management system, with a 13-table schema and 31 endpoints supporting multi-step routing across 5 departments and 7 divisions
- Also built a QR/GPS-based attendance app (**Flutter + Laravel**) letting employees clock in/out by branch, with an admin dashboard for live company-wide attendance stats

R&D Committee – UYBİST — **Bursa, Türkiye**
President — Sep 2024 - Jul 2026

- Led and coordinated 50+ students across multiple research and development projects and competitions, successfully channeling their focus toward technical goals.
- Organized Git & GitHub training for 25+ students, introducing version control and code review practices

PROJECTS

L-Timer — **Mar 2026 - Present**
Full Stack Developer & Solution Architect

- Building a web platform that delivers project-management psychometric assessments for a professor at Bydgoszcz University of Science and Technology replacing a legacy tool used since 2005
- Designed the system architecture and access control, built with **Laravel 12**, **Alpine.js**, and **MySQL**, with interactive visualizations of results

HilalAI – Exam Preparation Web Application — **Mar 2025**
Backend Developer

- Developed **Laravel** backend that extracts content from educational PDFs using smalot/pdfparser and leverages Gemini API to generate AI-powered summaries and practice questions for exam preparation.

IHAWK – UAV-Based Disaster Response Platform 1st Place - Hackathon Winner — **May 2025**
Team leader & Backend Developer

- Led a 5-member team to build a **Python/Flask** backend that uses AI to detect building damage from drone imagery, generating real-time maps to prioritize earthquake search-and-rescue

Document Management System — **Oct 2023 - Feb 2024**
Full Stack Developer

- Built a **C#/MySQL** desktop app for tracking university document archives (custody, location, audit history) without storing files; ranked 1st among all student projects in the course

Campus Nearby — **Oct 2024 - Feb 2025**
Backend Developer

- Built a **C#/ASP.NET MVC** platform for university students to create/join communities and events, with an admin panel for moderating and approving content

SKILLS
